SUBJECT: Predetection Recording System J-4926

ATTENTION: [redacted]

STAT

Dear Temp:

Pursuant to recent discussions with SFO personnel [redacted] this contractor is pleased to forward three (3) copies of a proposal for a predetection recording system which we believe will provide a very desirable adjunct to EIR system capability on selected missions. The predetection recording system will consist of two units which can on any given mission be substituted for two of the receiver units in the right bay. The proposed system will provide for predetection recording in Bands 2-10.

STAT

A budgetary estimate for a breadboard and a prototype recorder and playback unit is \$400K with a 12 month delivery schedule. A firm cost proposal can be furnished upon your request.

In view of special interest in predetection recording by SAC personnel including [redacted], we trust you will forward the appropriate information. Please contact [redacted] or [redacted] on any questions related to this proposal.
